

The Military Geography of the Solar System (Paperback)

By MR Walter J Gomez

Createspace Independent Publishing Platform, United States, 2013. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.This a book about military operations in outer space in the middle of the 21st century. Using the experience of military aerospace operations on earth, and the history of NASA space exploration during the past half-century, the author looks into the future to describe what military operations will look like in the middle of the 21st century. The model of military geography is used to explain how both natural and cultural environmental factors will affect military space operations, in the interplanetary medium and on the planetary bodies. On another dimension: it is shown that the battles in space wars will be fought along the electromagnetic spectrum, the gravitational field, and cyberspace. It is likely that by the year 2060 there will be human outposts throughout the solar system. Some of these already exist in the form of the International Space Station, as well as the other spacecraft that are operating within the interplanetary medium and on Mars. As of 2013 there is serious preparation for establishing permanent manned and unmanned stations on Mars, the Moon,...
